n8n Workflows Published	Community Workflow Installs	Community Challenge Winner	Engineering Experience

PROFESSIONAL SUMMARY

Automation Engineer and n8n Verified Creator with 6+ years of experience building systems that eliminate manual work. My published workflows have 1,000+ installs across the global n8n community, and I won the April 2026 Community Challenge with an AI-powered NPM Package Intelligence Agent. I specialise in operational workflow automation, AI agent pipelines, API integrations, and event-driven systems — delivering production-ready builds fast, with error handling, retry logic, and observability baked in from day one. Background in enterprise data engineering (Accenture, Tiger Analytics, L&T) gives me the architectural thinking to build things that scale.

CORE CAPABILITIES

Workflow Automation
Full trigger-to-outcome automations on self-hosted Docker with retries, error branches, and observability baked in from day one.

AI Agents & LLMs
GPT-4, Claude, Gemini wired into multi-step agents with RAG pipelines, function calling, and vector store retrieval.

API Integration
REST, GraphQL, OAuth, webhooks connecting CRMs, databases, and SaaS tools cleanly — resilient to API changes.

Error Handling
Retry logic, fallback branches, and real-time alerting so automations self-recover instead of waking someone at 2am.

Event-Driven Pipelines
Webhook-triggered and rate-limited bulk pipelines handling high-volume events without dropping a single record.

Data Scraping
Firecrawl, Apify, headless browsers with proxy rotation — structured data for lead gen, research, and enrichment.

Workflow Architecture
Complex flows broken into modular sub-workflows with shared credentials, clean logs, and Git version control.

n8n Community Nodes
Custom TypeScript nodes when built-ins fall short. My Rate Limiter node is verified by n8n and live on n8n Cloud.

Micro-SaaS & Extensions
Chrome extensions and micro-SaaS tools shipped end-to-end: UI, auth, payments, and automation all in one build.

N8N PORTFOLIO — PUBLISHED WORKFLOWS

🏆 **COMMUNITY CHALLENGE WINNER** · *April 2026*

AI-Powered NPM Package Intelligence Agent

GitHub + npm APIs + Firecrawl + GPT-4 + Gemini — dependency auditing, vulnerability detection, AI-generated package insights. Shipped in ~55 mins. 🔗 *n8n.io/workflows/15410*

- **Invoice Data Extractor (PDF → Google Sheets)** — 146 installs. OCRs scanned invoices with Sarvam AI + Gemini; structures line items and writes validated rows directly into Sheets. Multi-language support.
- **LinkedIn Lead Enrichment Pipeline** — 3-phase pipeline: SerpAPI profile discovery → AI validation agent → Apify work history scraping → domain discovery. Batched with full rate-limit handling.
- **Support Email AI Agent (Re:amaze + Gemini)** — 52 installs. Reads incoming tickets, retrieves matching SOP from knowledge base, drafts grounded reply — escalates to human only when confidence is low.
- **Legal Contract Risk Analyser** — Hybrid RAG pipeline: stores contract clauses as vectors in Supabase, uses Gemini to retrieve relevant terms, flag risky language, and summarise exposure.
- **Crypto Portfolio Tracker & Risk Analyser** — Pulls wallet balances across multiple chains via QuickNode, merges into a single view, uses Gemini to assess concentration risk and generate alerts.
- Rate Limiter Community Node — custom TypeScript n8n node verified by the n8n team and live on n8n Cloud for anyone to install.
- Full portfolio of 10 published workflows at n8n.io/creators/divyanshugupta · 1,000+ total installs · mentorship available via topmate.io/divyanshubistudio

PROFESSIONAL EXPERIENCE

Business Intelligence Developer

Nov 2024 – Present

Tiger Analytics

Noida, India

- Built scalable Lakehouse data pipelines on Microsoft Fabric, reducing processing time by 40% and enabling real-time insights — the same pipeline-design thinking behind my n8n ETL flows.
- Migrated 15+ Tableau dashboards to Power BI; led 10+ training sessions for 200+ users across the business — comfortable owning full end-to-end delivery and adoption.
- Implemented incremental refresh for 50M+ row datasets, cutting refresh time by 70% — performance-first engineering applied across data and automation stacks.

Senior Data Analyst

Sep 2023 – Nov 2024

Accenture India

Noida, India

- Engineered a React + Power BI REST API portal giving 300+ users secure embedded analytics and saving 25 analyst hours per week — deep REST/API fluency now core to my n8n builds.
- Automated SQL/M transformations using Microsoft Copilot, reducing manual coding by 40% — fast, AI-augmented build cycles consistent with high-pace automation delivery.
- Optimised semantic models using Calculation Groups, eliminating 50% redundant measures — non-overengineered, maintainable architecture by default.

Power BI Analyst

Jul 2018 – May 2022

Larsen & Toubro Limited

Indore, India

- Delivered 25+ business-critical dashboards end-to-end: stakeholder discovery, data modelling, secure deployment, and governance — strong full-cycle ownership from day one.
- Implemented reusable Dataflow ETL, cutting redundant transformation effort by 40% and accelerating delivery cycles across multiple business units.
- Architected Row-Level Security (RLS) achieving 100% compliance with data access standards — security-aware design carried into every automation I build.

SKILLS & TOOLING

Automation	n8n (advanced) — webhooks, HTTP nodes, sub-workflows, credentials, retry logic, deduplication, parallel execution, self-hosted Docker
AI / Agents	GPT-4, Claude (Anthropic), Gemini, LangChain in n8n, RAG pipelines, vector stores (Supabase / Pinecone), multi-step agent reasoning
AI Dev Tools	Claude Code (agentic CLI coding), Claude Cowork (desktop automation), Anthropic API, Cursor, Replit, Lovable, NotebookLM

APIs & Data	REST, GraphQL, OAuth, webhooks, JSON/XML, SQL, Python (Pandas, PySpark), ETL pipelines, Microsoft Fabric, Azure Data Factory
Scraping	Firecrawl, Apify, headless browsers, proxy rotation — structured data extraction for lead gen, enrichment, and market research
CRM & Ops	CRM automations, Slack / Notion / Google Workspace integrations, form-to-database pipelines, webhook-based operational flows
BI & Cloud	Power BI, Advanced DAX, Power Query (M), Databricks, Spark, Azure (Data Factory, Synapse, Data Lake), Git, CI/CD

CERTIFICATIONS & EDUCATION

🏆 **n8n Community Challenge Winner — April 2026**

- ✦ n8n Verified Creator (Official)
- ✦ Microsoft Fabric Analytics Engineer DP-600
- ✦ Power BI Data Analyst Associate PL-300
- ✦ Azure Data Engineer Associate DP-203

Post-Graduate Certificate, Business Analytics — IIM Indore | CGPA 3.50 / 4.33 | 2024

B.Tech, Mechanical Engineering — NIT Hamirpur | CGPA 8.77 / 10 | 2018
